“Expertise and Handy”

MYSCHOOLS” SOFTWARE FOR SCHOOLS PROFILE

MySchools is a fully integrated School management and Student Information system. The implementation of this management Information System creates a centralized pool of data for all school stacker holders (Administrators, Teachers, Accounts, Library and Human resource). This puts at easier what would be hard tasks, work which takes quite long time, takes seconds while using Myschools software. Users are categorized into levels (Administrators, Class Teacher, Library and Accounts), each level accessibility is limited to only activities of that level. For example a Class Teacher entering marks will never know the existing of another user (Accounts) who enters student fees, but a management report (Student report card) has schools fees balance fetched from accounts. This kind of information sharing simplifies resource sharing among different departments of the school thus simplifying the decision making process and overall impact is effective school management.

The system deploys modern security and encryption mechanisms to manage school data for example username and password are encrypted before being transverse from one page to another, this limits intruders who would hack user session.

At the academics side, the subject marks are protected by a PIN, which can be changed at any time by the subject teacher. The implication of this implementation is that no one can ever temper with subject marks.

The system automatically records user activities. This way of recording users makes it easier to track who did what, at what time and which place.

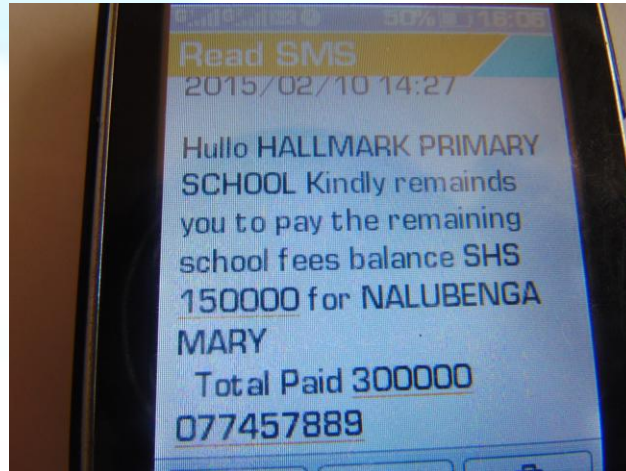

Below is an outline of systems functionalities;

- Student admission
- School fees collections
- Staff and students Class Attendance management.
- Library management.
- Staff payment management
- Report card production
- Communication to Parents through Email and SMS communication
- Finance Management

Unique Myschools features;

1. Dynamic Set ups for grades, Examinations, Class, Subject Teacher, Class Teacher and Head Teacher comment set up, staff salary set ups.

2. All reports exported to MS word and Excel, these two applications are very familiar with users.
3. One system for every one (School Administrators, Bursar, Class Teachers, Subject Teachers and Parents).
4. Email notifications to Parents (school fees balance demand notice) and any other school to parents' communication.
5. A single click of a button will send fees payment SMS reminders to parent telephone contacts indicating the names and balances of each student. This improves school fees collections and bridges the school's parent divide.

**Figure 1:
Reminder SMS**

Sample fees

6. A parent's portal for keeping parents up to date about their at school children.

System benefits;

1. No need for data backup. This we do it for you online at zero extra cost.
2. Free 24 hours online support (Live Chat messenger).
3. Highly professional student BOT, MID, EOT student report cards.
4. School fees management (Invoicing of each student)
5. School fees payment reports (Demand Notes, Payment list, Bank reconciliation, Income Statements)
6. Dynamic set up for grades, school fees structure, Salary set ups and report form comments.
7. Accessibility to school data whenever you are provided you have an internet connected computer.
8. Security of the school data. Losses due to hard disk failures, fire, and theft are no more, as school data is stored by virtual cloud server whose access is only by authorized users.
9. User friendly information system at affordable prices. A lot of money that would be spent in buying and maintenance of servers, hiring of IT staff and purchase of confiscated equipments is saved.
10. Instant single and bulky SMS notifications to parents. Whenever student(s) fees payment bank slip is received at school and entered into "MySchool", an SMS is instantly sent to

parent’s mobile contact provided at admission, the SMS indicates the Total Amount paid and balance due.

11. Access to school data is whenever you go, provided you have an internet connected computer.

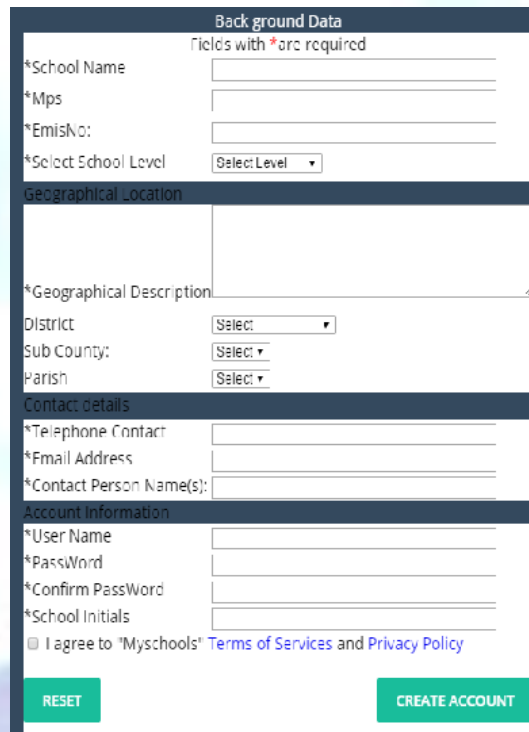

12. The SMS platform can also be used for other communications like Invitation Meeting, weddings, Introduction, Death, Get together, birth days and surprise bulk SMS sending.

System Sign up Process;

To open an account for your school, visit: jsmis.jotellug.com

1. Click on: 

2. Fill the online form

An email will be sent to the email address you provide with a link to activate your account. Click on the link, your account will be activated for a period of 2 month free of system use.

For system set up / configurations click on the Help button to download the system Manual

System Costs for a school with a population below 250

No	Item	Rate per month	Quantity	Amount
01	System Set up and configurations	500,000	1	500,000
02	User Training – per person	200,000	2	400,000

03	Termly Subscription	150,000	3	450,000
Total				1,350,000

For a population above 250 students ask for a quotation.

Investment plan for a school using myschools;

No	Item	Rate	Quantity	Amount
01	Internet	10,000 per week	4 weeks x 3 months per term	120,000
02	Myschools monthly subscription	200,000	3	600,000
03	Printing	250	200	50,000
Total				770,000

Benefits;

The same internet can be used for other purposes like reading mails, sending sms to parents, fees reminders to phones and email, bringing the parent school divide, access to all reports just at a few clicks, centralization of all school stack holders. Highly professional report cards, fees payment reports, student statements, bank slips etc.

Investment plan for a school using manual ways / scattered softwares;

No	Item	Rate	Quantity	Amount
01	Internet	10,000 per week	4 weeks x 3 months per term	120,000
02	Production of report cards	20,000	10	200,000
03	Printing	250	200	50,000
04	Allowance to class teachers	60,000	12	720,000
Total				1,090,000

What you miss;

The internet is only used for limited purposes like reading mails. Manual report cards are inaccurate, room for correcting errors is too too tiresome most cases involves re – writing the all report card. Delay in information flow by stack holders and its clients (reports production depends on individuals will to either alter or maintain information originality).

From the two cases above, it's evident that most schools spend a lot of money in maintaining their current state (manual way or using scattered software).

We look forward for a meeting to discuss the possibility of implementing this innovation to your school.

We look forward to be of value to your school as we build for the future.

In case of any inquiry, do not hesitate to contact us on the above addresses.
